Professional Experience

Range / Software Engineer, AI and Investments — May 2025 - Present, New York, NY

Designed and shipped the proactive execution system for Range's AI wealth assistant, available on web and iMessage, enabling scheduled follow-ups, periodic reviews, and event-triggered outreach.
Built queued background agent workflows with save-before-send delivery, safe retries, and consent and quiet-hours guardrails enforced in code.
Built an end-to-end evaluation harness that runs real background agent workflows against isolated synthetic households, testing useful outreach and appropriate silence.
Improved iMessage reliability with mid-response steering, photo/PDF/voice attachments, and shared conversation history with the web app.
Introduced observational memory and bounded context; fixed framework and model-provider issues affecting long, document-heavy agent conversations.
Shipped full-stack brokerage and advisor tools, including automated financial plans, safer account opening, and operations cases driven by provider events.

Salesforce / Software Engineer (MTS) — August 2022 - April 2025, New York, NY

Built and launched a greenfield ETL product in Salesforce Flow that scaled from 0 to 1.2M transactions in six months, averaging 42.8% MoM growth in daily active users.
Designed a UI for configuring field mappings, SQL joins, and aggregations, with guardrails against misconfiguration, so non-technical customers could build complex automations.
Shipped production features in TypeScript, React, and Java. Mentored a summer intern through successful project completion.

Selected Projects

Railwatch

Built and operate a public Amtrak tracker with live train positions and delay predictions, serving 3,000+ weekly visitors. Added an MCP interface for AI-accessible train status; own deployment and reliability.

Incolia

Building an agent-native platform for persistent AI identities, scoped permissions, and shared communication between autonomous agents.

Education

Haverford College / Computer Science Major — Graduated May 2022, Bachelor of Science

3.7 GPA. Minors in Statistics and Neuroscience.

Technical Skills

Languages and Frameworks: TypeScript, Python, Java, SQL, React, Node.js, FastAPI.
AI and Agents: LLM tool calling, agent orchestration and evaluation, context engineering, MCP.
Infrastructure and Tools: Mastra (TypeScript AI framework), AWS, CI/CD, Playwright.
